

Rainwater Catchment System Design and Installation

The **RainBank** team has over 13 years of combined experience designing, installing and maintaining rainwater systems in the San Juan Islands. We have installed systems with a combined capacity exceeding **over a million gallons of rainwater storage in the San Juan Islands!**

Our lead system designer is a ARCSA (American Rainwater Catchment Systems Association) Board Member, with experience designing customized systems from as small as 4000 gallons up to larger than 50,000+ gallons. Our systems designed and installed over 10 years ago are still providing their owners a secure flow of clean water for irrigation and consumption.

Please contact us with **your** requirements; we'll be pleased to consult with you on-site.
