

Maintenance Programs For Rainwater Catchment Systems

An Annual Maintenance Program ensures your water quality and system efficiency.

Changing filters at least once a year (although 3X is recommended for normal continuous usage), will promote the quality and longevity of your system. A thorough annual system check of your storage tank and all other components by a professional will prevent the majority of future problems. We maintain systems which we installed over 10 years ago, which still provide excellent water quality, yet require only minimal maintenance.

We take care of all systems installed by us and our partners. If you would like coverage with our annual maintenance plan on a system which was not installed by us, we will be happy to inspect your system, and if it meets our standards, we can provide you with one of our annual rain catchment system maintenance plans outlined below.

A Choice of Maintenance Plans to fit your needs.

Plan A. Best for Seasonal Residents

3 visits / 2 filter changes

- * Spring system check & reactivation with filter change
 - * Summer filter change
 - * Fall Winterization
